

More than 400 European civil society organisations from twelve Member States demand a radical change in the Common Agricultural Policy

Dear Mrs. Julia Klöckner, representative of the German presidency of the AGRIFISH Council,

In four days, you will host an informal AGRIFISH Council in Koblenz, gathering agriculture ministers of all EU Member States, to discuss lessons from the COVID-19 pandemic, initiatives for animal welfare and the reform of the Common Agricultural Policy (CAP). Germany has the tough assignment of reaching an agreement on the CAP reform within the Council during its six-month presidency. Your responsibility is immense: CAP directly concerns all EU citizens, directing more than 30% of the next EU budget. CAP is also core to addressing our considerable ecological and social challenges.

The coronavirus pandemic has shown that the European Union must prioritise food sovereignty. This requires the EU to redefine the purpose of the CAP and trade agreements, which currently threaten food sovereignty in Europe and other regions. EU agri-food policy means: cheap and unsustainable imports and exports, in particular from and to developing countries (contributing to global warming by deforestation and land degradation); overspecialisation in production; limitless productivity goals and a dominant focus on competitiveness which fails to protect soil fertility and biodiversity, or the people who work in rural areas in Europe and other regions, including farmers. In short, CAP and current EU trade policy harms our ability to sustainably feed European communities.

The European Commission has set the direction for more sustainable development and climate neutrality to 2050 with the Green Deal, including the Farm to Fork and Biodiversity strategies. The Green Deal sets the course that the post-2020 CAP must follow - namely a major shift in our agri-food sector, including the whole food-chain. A continuation or an optimisation of the current system is not an option. Changes in the Common Agricultural Policy are necessary if we want to ensure the continuity of agricultural production in Europe, on which the food security of our generation and future generations depends. Furthermore, solutions to reform the CAP in the right direction are already known and widely shared by a wide-range of scientific experts - so we know why and how the next CAP must change.

Coalitions from twelve Member States – working closely with EU civil society umbrella coalitions and organizations, including farmer’s ones, and directly involved in the preparation of respective national CAP strategic plans – demand you lead the Council towards:

- A CAP reform that is compatible with the Green Deal, in particular with the targets of the Farm to Fork and Biodiversity strategies, while maintaining an EU-wide common approach. This means fundamentally changing the CAP’s outlook to ensure long term ability to produce food, by rebuilding functioning ecosystems, bringing agriculture in line with legal obligations under the Paris Agreement and boosting the shift to healthy diets.
- A much higher level of ambition as regards CAP conditionality, animal welfare, public health, sustainable water use, climate and environment protection, while improving farm viability, diversification, generational renewal and thereby the resilience in rural livelihoods.
- Replacing blind per hectare payments with the principle of “public money for public services” (including rural employment), shifting support to measures that enable farmers to invest in their agro-ecological transition, flanked by market-based mechanisms to improve economic viability, so that farmers can get a decent livelihood from their work as well as a greater weight in the value chain.

- Strengthening the so-called new delivery model, to ensure that the CAP budget will be used efficiently, by improving the result-based indicators as well as the CAP performance and monitoring checks and by setting common and ambitious ring-fencings of funds.
- Guarantees for effective transparency and stakeholder inclusion in the national processes for the preparation of strategic plans, as well as in the deliberations on national positions, negotiations between Member States and the Commission.

The CAP will lose any legitimacy in the eyes of EU taxpayers and consumers if the Council ignores these demands. In a few days, during the AGRIFISH informal Council in Koblenz, protestors will carry the voice of thousands of European citizens, to remind you of these demands. Our message is clear: the post-2020 CAP reform represents a major opportunity for the EU's food and farming sector to transition into a sustainable system. We challenge the German presidency to bring the CAP reform in line with climate and biodiversity goals, and to end the decline in farm diversity and numbers. The path you are currently on is failing in all these areas, whereas you should use the ongoing negotiations to write a new page for our agriculture. Do not compromise our future! Act!
